

Rooftop Solar Initiative in Vietnam

Bumi Armada Berhad successfully installed a 16-kWh rooftop solar power system at the Bong Lai Orphanage Centre in Vietnam. This initiative not only fulfils the daily electricity needs of the orphanage, which houses up to 100 children, but also enhances their living conditions and reduces energy costs. Aligned with our commitment to environmental sustainability, this project reduces reliance on fossil fuels and helps lower the orphanage's carbon footprint, contributing to a cleaner and greener future. This initiative covers SDG 7 – Affordable and Clean Energy as well as SDG 1 – No Poverty.
