

Turtle Conservation Awareness and Nesting Site Monitoring Programme

On 14th October 2025, Bumi Armada Berhad collaborated with the Department of Fisheries Pahang for the Turtle Conservation Awareness and Nesting Site Monitoring Programme, through hands-on conservation activities such as monitoring hatching sites, assessing success rates, and improving nesting conditions.

As part of its marine conservation commitment, Bumi Armada sponsored a satellite tracking device to monitor the migratory patterns of a nesting mother turtle, supporting data-driven conservation and aligning with SDG 14 (Life Below Water) and SDG 15 (Life on Land). Conservation efforts have led to an increase in turtle landings, reflecting the positive impact of continuous protection and restoration work. The company remains committed to advancing marine conservation with DOF Pahang for lasting benefits to coastal ecosystems and communities.
