Health and Safety Initiative of the Year (Malaysia)

and

ESG Initiative of the Year (Malaysia)

Bumi Armada Berhad secured two major honours at the Asian Oil & Gas Awards 2026, winning Health and Safety Initiative of the Year - Malaysia and ESG Initiative of the Year - Malaysia.

The awards recognise the company's achievements in digitalising its health, safety, security and environment (HSSE) management processes and implementing waste management and circular economy programmes that have delivered measurable environmental benefits.

For the Health and Safety Initiative of the Year - Malaysia category, Bumi Armada was recognised for deploying Synergi Life, an integrated management platform that has transformed how HSSE risks, incidents, audits and corrective actions are managed across the organisation.

Initially launched in Malaysia in December 2023, the platform has since been rolled out across the company's operations in Angola, India, Indonesia, Malta, the United Kingdom and Vietnam. By replacing spreadsheet-based processes with automated workflows, real-time dashboards, and integrated action tracking, the system has improved visibility, governance and accountability across the business.

The initiative delivered significant operational improvements between 2023 and 2025. Audit action on-time closure rates rose to 89%, whilst overdue audit action closure rates reached 95%. Incident management on-time closure rates improved to 92% in 2024 and were sustained through 2025. Near-miss reporting also increased by 248%, reflecting stronger workforce engagement in proactive safety reporting. Building on these results, Bumi Armada is expanding the platform to include assurance management and loss reporting capabilities.

In the ESG category, the company was recognised for fostering a waste management and circular economy culture through a series of recycling, reuse and awareness programmes.

To address the limited recycling infrastructure at Menara Perak, Bumi Armada introduced a quarterly e-waste and recyclables buy-back programme in November 2024 in collaboration with Alam Flora Environmental Solutions (AFES). The initiative, which is open to all building tenants, diverted close to 3.7 tonnes of material from landfills as of June 2026.

The company further expanded its environmental efforts through a textile recycling campaign with Kloth Cares, which collected nearly 250 kg of fabric waste by June 2026. Educational visits to recycling facilities and upcycling workshops were also conducted to promote resource circularity and responsible consumption.

In support of waste reduction efforts, Bumi Armada organised biannual employee Swap Parties that encouraged the reuse of clothing and household items before recycling, extending product lifecycles and helping prevent waste generation. The company also maintains due diligence processes for all recovery partners to ensure responsible end-to-end management of collected materials.

The Asian Oil & Gas Awards honours organisations that demonstrate excellence, innovation and measurable impact across the oil and gas value chain, recognising companies that successfully drive digital transformation and sustainable business practices in a rapidly evolving industry environment.
